

Dear Sir/Madam

## Foreward

# *GTE Anti Radiation Device*

*Approved by SAR*

Children form a vital part at home and in the life of a community and schools not only shape the future generations of the country, they also have a vital and critical role in instilling important cultures in each society by imparting those to children. Children can hence become harbingers of valuable messages to parents and the community itself. It is in this context, to prepare each one get ready to keep all safe and secure always due to radiation affects; we introduce here **GTE Anti Radiation Device** among children. Through them the message will reach at every member at home, and the entire country; it will ensure that we all are aware and alert always to keep our home- country safe and secure.

We present here a set of Anti radiation device, to reduce the impact of such radiations. In a country like India where awareness level is very low, it is needful to emphasize the important role that teachers and students can play in creating awareness in communities, and reaching vital information to all. It is not uncommon to find that a school teacher or student has become an efficient "Role model" manager for a community that has faced a severe problems/disaster in the recent past. They have done appreciable work in generating an awareness about any untoward incident, vulnerabilities, how to cope with them, and work together as a team to reduce the impact of the incident. Truly, these are the examples that reiterate the strong social responsibility that the institution of school carries with it.

Above and all it's our prime responsibility to train ourselves and further to carry out similar initiatives in their society which would help in creating safe and secure environment in the entire country. During our orientation programmes in past, we involved all the sectors of the society, which have been found useful.

It is necessary for principals to initiate certain activities at regular intervals such as:

Trainings of students or teachers on...

### **Mobile and Cell towers Radiation Effects**

If there is a cell tower (radiation level released 400 MW to 4000 MW) in a radius of 500 meters from your residence, school or work place, it is very dangerous. presently radiation level that we are facing is 2000 MW. In Delhi due to this 6000 cell towers taken off. It is confirmed by World Health Organization (W.H.O) that due to radiation many life threatening diseases Leukemia, Skin cancer, Brain tumor are affecting our health. Scientists and researchers also confirmed and warned to take the precautions.

We are suffering due to this radiation and having problems viz. Lack of mental stability, Loss of appetite, Getting irritated and frustrated frequently, Effecting studies and memory loss.
